it.aerospace supplier for suppliers in the aviation industry

Take off to success **with** our
solution it.aerospace supplier

itelligence

it.aerospace helps your success soar:

To achieve high-flying goals, you need an organisation with its feet on the ground.

»With it.aerospace supplier, we offer suppliers in the aviation industry a proven integrated solution based on SAP ERP. Our solution is designed to offer optimum control for all processes in areas ranging from planning, development, documentation, materials management, requirements planning and production, quality management, sales and customer service through to accounting, controlling and human resource management.«

itelligence AG

For aircraft manufacturers, a key measure to cut production costs is to optimise the whole process chain, from the development and manufacture of semi-finished products through to final assembly of the aircraft.

In the future, aircraft manufacturers, aerospace suppliers, development partners and retailers will have to work closely together in a networked system. This is the only chance they have to respond flexibly to rapidly changing customer requirements from the airlines and passengers and the substantially shorter aircraft model cycles.

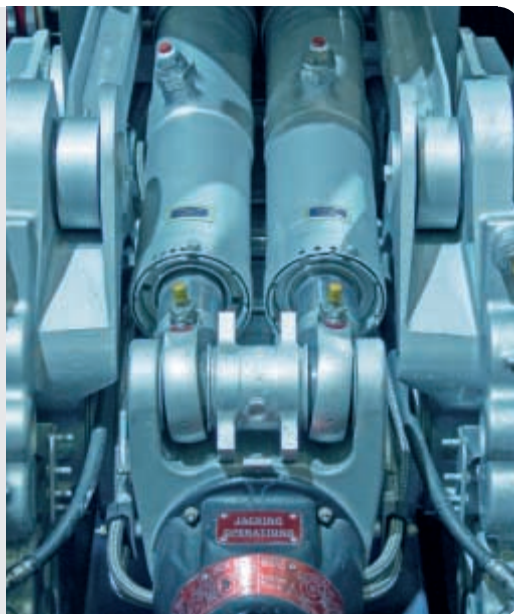

This global networking will integrate suppliers far more strongly into the processes of the aircraft manufacturers. In order to survive, supplier

businesses will need to become significantly more involved as risk-sharing partners.

Ever more importance is being placed on digital cooperation between development and manufacturing businesses in the fields of research and development and international production networking. Suppliers can only meet the demands of airlines and aircraft manufacturers using an innovative and proven software solution.

This is why we have tailored our industry solution it.aerospace supplier to meet the requirements of the supplier market in the aviation industry. The solution spans the entire development process, sales, logistics and quality management, including administrative functions.

The devil is always in the details, even in the biggest of projects.

What benefits does this pre-configuration offer you as a customer?

With it.aerospace supplier:

- You gain a fast and secure implementation of an industry solution for suppliers in the aviation industry. A double saving – on both time and money!
- We provide you with a sophisticated industry solution that has been tried and tested on the market
- You can enjoy fully integrated business transactions in all areas
- You benefit from having a pre-configured solution with implementation methods tailored to the mid-market

If you want to see success in the skies, you have to get going on the ground.

With our solution, we provide extensive pre-settings for all relevant processes and documentation to meet your demand for an optimised, fast SAP implementation.

The solution includes:

- Clear project methods: easy to understand and comprehensive
- Business scenarios with master data and flow data, directly executable processes in the project work
- Detailed project and user documentation
- User roles for the key work centre descriptions
- Data specifications and proven proposals for data transfer
- Test catalogues for customer-specific function and integration tests
- Proposals for the most commonly used forms

Our implementation methods cover structured use of the SAP system in project work with clear milestone planning. After achieving previously defined milestones, project progress is documented respectively – providing integrated, continuous quality assurance.

it.aerospace supports all the relevant processes in your company

Effective tools support the product life cycle, starting from product development with integrated project management to administer

project activities, milestones and quality checks. The processes are complemented by a document management system, which manages all documents generated during the development process, for example, ranging from designs, drawings, checklists, agreements and inspection reports, right through to the integration of various CAD systems. This means that all documents and data are available in digital format. The product life cycle is rounded off with comprehensive product data management, combined with extensive change management and where-used lists to track products.

»With it.aerospace supplier, you can optimise all the relevant processes in your company.«

The system provides efficient support for all logistics tasks – from planning, procurement management, warehouse logistics, batch and serial number management, requirements planning and production, through to sales, customer project management and shipping. These logistics processes are supplemented by a quality management system, which enables key quality checks at all times with the relevant documentation. The logistics solution is enhanced by integrated service management, complete with service messages (AOG), provision of replacement parts, on-site service and modification.

The solution is rounded off by integrated accounting with financial and asset accounting, controlling and human resource management.

Our experience shows that every industry has its own specific IT requirements, owing to their different processes. This is why at itelligence, IT and industry specialists work in close collaboration to produce your solution.

itelligence SAP All-in-One industry solutions are preconfigured for the typical business processes of a specific industry, thus enabling costs and implementation times, in particular, to be radically reduced. Other benefits include almost unlimited scalability and a high level of flexibility, as well as increased productivity and cost control.
